

Prashant Singh Chauhan

Data Analyst | Business Intelligence Developer

Toronto, ON | +1(437)-665-0895 | Prashantch.94@gmail.com | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY

Data Analyst and Business Intelligence Developer with 5+ years of experience in Excel, Power BI, SQL, Python, and Tableau, specialising in KPI reporting, dashboard development, and predictive analytics across operations, retail, and financial environments. Hands-on experience transforming raw data into structured datasets, performing variance and trend analysis, and delivering insights that improved revenue visibility and reduced operational inefficiencies. Strong understanding of ETL concepts, data validation, and stakeholder-focused reporting.

SKILLS

Python (Pandas, NumPy, Scikit-learn, Seaborn)
Tableau (Star Schema & Data Modelling)
Power BI (DAX, Power Query, Data Modelling)
Dashboard Development
KPI Reporting
Feature Engineering
Azure Fundamentals
MS-Suite

Excel (Pivot Tables, Macros, VLOOKUP)
ETL & Data Pipeline Development
SQL (MySQL, PostgreSQL, snowflake)
BigQuery
K-Means Clustering
Time Series Forecasting
Predictive Modeling
JIRA

WORK EXPERIENCE

Tech Star Plastics

Canada, Ontario

Manufacturing Operations Analyst

- Audited and logged real-time machine performance data, tracks, and diagnostic error codes, ensuring baseline stability across high-output production lines, using advanced Excel techniques such as Power Query editor.
- Analysed quality control data and tracked defect frequencies; identified a 5% spike in component variance and collaborated with engineering to recalibrate machinery, reducing material waste.

Tim Hortons

Canada, Ontario

Operations Analyst Supervisor

August 2023 – September 2025

- Hired as an in-house operations analyst to build reporting infrastructure for a multi-location franchise group.
- Automated reporting and tracking activities using advanced Excel functions, including Pivot Tables, VLOOKUP, Data Validation, and PowerQuery, reducing reporting time by up to 60%.
- Analysed 1,200+ daily transactions using Excel to track KPIs such as revenue, average order value, and sales growth trends.
- Built forecasting models using historical sales data to optimise inventory planning, reducing food waste by 12% annually.

Four Seasons Hotels & Resorts

United States, Colorado

Operation & Reporting (Management Training Program)

June 2022 – May 2023

- Collaborated with cross-functional stakeholders to gather requirements, conduct workshops, and translate business needs into functional and technical BI solutions.
- Supported KPI tracking and reporting for premium beverage sales, contributing to \$50K+ monthly revenue.
- Improved inventory accuracy by 10% through structured audits and data reporting using JIRA.

Edvora

Remote

Junior Data Analyst

September 2020 – June 2022

- Performed data cleaning and transformation using Excel (Power Query) on structured datasets from APIs and internal systems with a team of 6 members.
- Conducted exploratory data analysis (EDA) to identify trends, anomalies, and data quality issues impacting the application performance of 1000+ application users.
- Maintained data documentation, data definitions, and reporting processes to support team scalability and knowledge sharing.

PROJECT EXPERIENCE

Telecom Customer Churn Analysis & Retention Strategy | Python, SQL, Scikit-learn, Tableau

- Engineered an end-to-end ETL Pipeline, ingested and cleaned a 7,043-record dataset using MySQL, building reusable views with advanced window functions to segment multi-year customer cohorts and track billing disparities.
- Uncovered High-Impact Business Insights, Identified that month-to-month contracts held a 67% churn rate and fiber optic customers without tech support had double the churn risk. Translated these behavioural trends into concrete financial data, connecting the drivers to an estimated \$3M annual revenue loss.

- Built Machine Learning models such as Logistic Regression, Random Forest model (79% accuracy) to predict churn risk, with tenure, monthly charges, and contract type emerging as top drivers via feature importance analysis.
- Authored an executive-facing interactive Tableau dashboard that integrated primary behavioural data with secondary geographic and demographic datasets. Mapped out churn density patterns and produced a full presentation deck to deliver data-driven retention strategies to stakeholders.

Credit Card Fraud Detection | *Power BI, DAX, Excel, BigQuery, Pandas,*

- Designed an interactive Power BI dashboard to track core financial risk KPIs, providing non-technical stakeholders and executive teams with a comprehensive view of transaction anomalies and feature engineering.
- Aggregated and synthesised transactional records in BigQuery, building optimised data tables that translated multi-layered fraud obfuscation techniques into clear, high-level business insights.
- Developed predictive anomaly detection thresholds using Z-score methodologies and time-series analysis to isolate complex fraudulent behaviour and reduce false-positive transaction flags.
- Engineered a machine learning pipeline utilising Random Forest and XGBoost models to classify highly imbalanced credit card transactions (under 0.117% fraud rate), fine-tuning hyperparameters to maximise precision and recall metrics.

EDUCATION

CDI College	Canada
Data Analytics Diploma	Current
General Assembly Canada	Canada
Data Analytics Bootcamp Grad.	2026
Swiss Hotel Management School	Switzerland
Post Grad. Diploma in Hotel Management	2020
PSIT College of Engineering	India
Bachelor of Engineering in Electronics & Communication	2018

CERTIFICATIONS & BADGES

- HackerRank SQL (Advanced) June 2026
- IBM Data Analysis using Python January 2026
